Sustainable Play and Durable Design In Harmony with Nature

For Legnolandia, producing with a low environmental impact means always choosing renewable raw materials and using only clean energy. Our century-long experience in woodworking, combined with technological innovation and a relentless pursuit of quality, allows us to create durable play equipment and furnishings made from Robinia wood—featuring exclusive designs and, above all, ensuring safety.

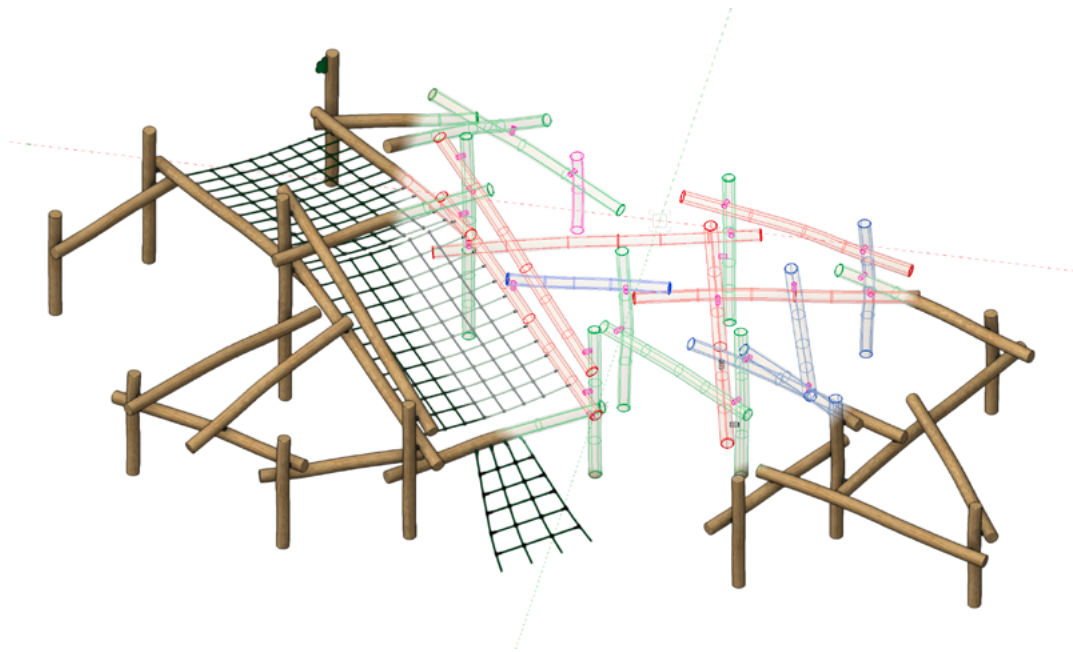

From the Italian forests of our region, we source Robinia wood locally at “zero kilometers,” a fast-growing species obtained through forest maintenance. This provides an ecological and responsible alternative to energy-intensive materials such as metal and plastic.

ROBINIA

SHAPED BY NATURE DESIGNED WITH LOVE

Our Robinia wood play equipment retains the natural curves and beautiful irregularities of the trunks, requiring great attention to the calculation of free spaces to prevent the entrapment of children's body parts during play. Carefully developed complex designs and specialized control techniques help Legnolandia's master craftsmen ensure maximum safety and optimized functionality in our product designs. The respect for raw materials, the love for wood and the focus on optimizing play value is maintained throughout the entire design and product development process.

TREES

UNIQUE IN THE WORLD

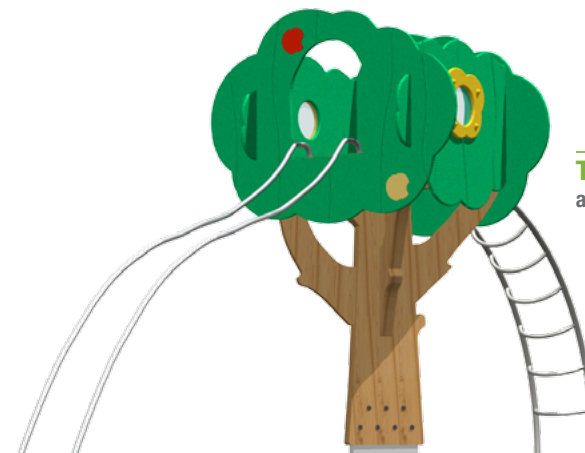

TREES are true treehouses, equipped with spacious platforms in a unique design. The exclusive single-pillar structure, made entirely of high-quality interlocking laminated wood, is engineered to withstand overloads and the test of time without requiring special maintenance.
