## The Constant Commitment to a Zero-Impact Production

The CO2 emissions represent one of the main risk factors for the balance of the environment. In the face of this threat, Legnolandia has developed a formula capable to reduce its emissions to almost zero and it allows to prevent the entry of 2.400 Tons of CO2 in the atmosphere every year. This has been achieved thanks to the sole use of clean energy which comes from natural and renewable sources.

## Zero Km raw material

The wood used during the production operations is obtained from the PeFc certified forests of the Friulian Dolomites and it is immediately available thanks to the short transport routes. The KM zero element is a key factor in reducing the pollution, as it allows the Company to remove almost completely the emissions caused by road transport.

## UNIQUE IN THE WORLD

TREES are true treehouses, equipped with spacious platforms in a unique design. The exclusive single-pillar structure, made entirely of high-quality interlocking laminated wood, is engineered to withstand overloads and the test of time without requiring special maintenance.

The TREES structures offer varying levels of challenges, from smaller models designed for kindergartens and schools, to larger treehouses intended for public spaces and recreational facilities.

TREES also include elements that comply with the guidelines of the European project "Play for All", aimed at creating playgrounds accessible to children of all abilities.
